EDUCATION

Georgetown University, Washington D.C.

Expected 2027

M.S. Computer Science

Florida State University, Tallahassee, FL

May 2021

Bachelor of Science in Computer Science

Honors and Awards: Phi Theta Kappa Honor Society, Dean's List

TECHNICAL PROFICIENCIES

Programming Languages: C++, Java, Python, JavaScript, TypeScript, HTML/CSS

Frameworks & Tools: React, Node.js, GitLab, Visual Studio, PowerShell, AWS

Certifications: CompTIA Security+ (August 2022) | AWS Certified AI Practitioner (In Progress)

EXPERIENCE

Department of Defense | Application Developer

Jan 2025 - Present

- Design, develop, and maintain front-end application features using React, JavaScript/TypeScript, and practical software development workflows.
- Contribute to full development lifecycle across feature development, code review, and deployment through GitLab-based version control and team collaboration.
- Improve usability, reliability, and maintainability of internal tools by refactoring code, resolving defects, and clarifying application behavior.
- Optimize legacy application performance through algorithm improvements and code refactoring, reducing technical debt and increasing system reliability.

Department of Defense, U.S. Air Force | Software/Cybersecurity Engineer

May 2022 - Jan 2025

- Led projects that reduced system vulnerabilities by 30% through implementation of enhanced security protocols, monitoring tools, and compliance-focused remediation work.
- Developed and supported secure software capabilities for internal communication, file handling, and operational workflows.
- Conducted vulnerability assessments, secure code reviews, and RMF-aligned security activities for mission-focused systems.
- Mentored new hires preparing for certification exams, achieving a 95% first-attempt pass rate through structured guidance and technical coaching.

SELECTED PROJECTS

Unix Shell Interpreter | C, Unix/Linux, Process Control

- Built a Unix-style shell from scratch in C, implementing command execution, I/O redirection, pipes, conditional execution, and job control without using `system()`.
- Implemented process management including background execution, `fg/bg` behavior, job tracking, and proper wait handling for child processes.

Facial Emotion Recognition Classifier | Python, Deep Learning, Computer Vision

- Trained and evaluated a computer vision model for facial emotion recognition using Python, comparing model architectures and performance across training strategies.
- Preprocessed and prepared image datasets, analyzed model outputs, and presented findings and implementation results to a project team.
